

Intégrale dépendant d'un paramètre

I - Théorème de convergence dominée

Th. TCD

Soit $f_n \in \mathcal{C}^1(I, \mathbb{K})$, $\forall n \in \mathbb{N}$
 $f \in \mathcal{C}^1(I, \mathbb{K})$

Si $f_n \xrightarrow[\text{I}]{\text{c.s.}} f$ ($\forall t \in I, f_n(t) \xrightarrow[n \rightarrow \infty]{} f(t)$)

(H0): Hypothèse de domination:

$\exists \varepsilon \in \mathcal{X}^+(I, \mathbb{R}_+)$,
 $\exists n_0 \in \mathbb{N}$ tq $\forall n \geq n_0$

$$|f_n(t)| \leq \varepsilon(t), \forall t \in I$$

Alors

$$\lim_{n \rightarrow \infty} \int_I f_n(t) dt = \int_I \lim_{n \rightarrow \infty} f_n(t) dt = \int_I f(t) dt$$

$f \in \mathcal{X}^+(I, \mathbb{K})$

proposition

Soit $f: J \times I \rightarrow \mathbb{K}$
 $(x, t) \mapsto f(x, t)$

et $x_0 \in \bar{J} \cup \{+\infty\}$

- $\forall x \in V \in \mathcal{V}(x_0), t \mapsto f(x, t) \in \mathcal{C}^1(I, \mathbb{K})$
- $\forall t \in I, \lim_{x \rightarrow x_0} f(x, t) = g(t)$

$\exists \varepsilon \in \mathcal{X}^+(I, \mathbb{R}_+), \exists V \in \mathcal{V}(x_0),$
 $\forall x \in V,$

$$|f(x, t)| \leq \varepsilon(t), \forall t \in I$$

Alors

$$\begin{aligned} g &\in \mathcal{X}^+(I, \mathbb{K}) \\ \lim_{x \rightarrow x_0} \int_I f(x, t) dt &= \int_I \lim_{x \rightarrow x_0} f(x, t) dt \\ &= \int_I g(t) dt \end{aligned}$$

II - Régularité sous signe intégral:

Th. Continuité

Soit $f: J \times I \rightarrow \mathbb{K}$
 $(x, t) \mapsto f(x, t)$

Si $t \mapsto f(x, t) \in \mathcal{C}^1(I, \mathbb{K}), \forall x \in J$
 $x \mapsto f(x, t) \in \mathcal{C}^0(J, \mathbb{K}), \forall t \in I$

(H0L) $\forall [a, b] \subset J, \exists \varepsilon \in \mathcal{X}^+(I, \mathbb{R}_+)$,
 local

$$|f(x, t)| \leq \varepsilon(t), \forall x \in [a, b], \forall t \in I$$

Alors $F: x \mapsto \int_I f(x, t) dt \in \mathcal{C}^0(J, \mathbb{K})$

Theoreme: Dérivation sous signe $\int$.

Soit $f: J \times I \rightarrow \mathbb{R}$
 $(u, t) \mapsto f(u, t)$

- S. . $u \mapsto f(u, t) \in C^1(J, \mathbb{R}), \forall t \in I$
 . $t \mapsto f(u, t) \in C^1(I, \mathbb{R}), \forall u \in J$
 . $t \mapsto \frac{\partial f}{\partial u}(u, t) \in C^0(I, \mathbb{R}), \forall u \in J$

- . $\forall [a, b] \subset J, \exists \varepsilon_0 \in \mathcal{X}^1(I, \mathbb{R}_+)$
 $\forall u \in [a, b]$

$$|f(u, t)| \leq \varepsilon_0(t), \forall t \in I$$

$$\left| \frac{\partial f}{\partial u}(u, t) \right| \leq \varepsilon_1(t), \forall t \in I$$

Alors

$$F: u \mapsto \int_I f(u, t) dt \in C^1(J, \mathbb{R})$$

$$F'(u) = \int_I \frac{\partial}{\partial u} f(u, t) dt, \forall u \in J$$

Theoreme:

Soit $f: J \times I \rightarrow \mathbb{R}$
 $(u, t) \mapsto f(u, t)$

Si . $u \mapsto f(u, t) \in C^n(J, \mathbb{R}), \forall t \in I$

$$. t \mapsto \frac{\partial^k}{\partial u^k} f(u, t) \in C^0(I, \mathbb{R}), \forall u \in J, \forall k \in [0, n]$$

(HDL) : $\forall [a, b] \subset J, \forall k \in [0, n]$
 $\exists \varepsilon_k \in L^1(I, \mathbb{R}_+)$

$$\left| \frac{\partial^k}{\partial u^k} f(u, t) \right| \leq \varepsilon_k(t), \forall t \in I, \forall u \in [a, b]$$

Alors

$$F: u \mapsto \int_I f(u, t) dt \in C^n(J)$$

$$. \forall k \in [0, n], \forall u \in J$$

$$F^{(k)}(u) = \int_I \frac{\partial^k}{\partial u^k} f(u, t) dt$$

Corollaire:

Soit $f: J \times I \rightarrow \mathbb{R}$
 $(u, t) \mapsto f(u, t)$

Si . $u \mapsto f(u, t) \in C^\infty(J, \mathbb{R}), \forall t \in I$

$$. t \mapsto \frac{\partial^n}{\partial u^n} f(u, t) \in C^0(I, \mathbb{R}), \forall u \in J, \forall n \in \mathbb{N}$$

(H.D.L) . $\forall [a, b] \subset J, \forall n \in \mathbb{N},$
 $\exists \varepsilon_n \in L^1(I, \mathbb{R}_+)$

$$\left| \frac{\partial^n}{\partial u^n} f(u, t) \right| \leq \varepsilon_n(t), \forall t \in I, \forall u \in [a, b]$$

Alors $F: u \mapsto \int_I f(u, t) dt \in C^\infty(J, \mathbb{R})$
 et $\forall n \in \mathbb{N}, \forall u \in J, F^{(n)}(u) = \int_I \frac{\partial^n}{\partial u^n} f(u, t) dt$
